

Tempo Zero Industry

for Microsoft Dynamics 365 Business Central

THE FUTURE IN THE DIGITALIZATION OF YOUR COMPANY

To modernize and increase the global efficiency of your company, **Tempo Zero Industry** for *Dynamics 365 Business Central* is an ERP developed for businesses and enriched with APPs and extensions always in line with the latest *Microsoft* technologies and the emerging needs of SMEs.

These extensions, proposed with constant releases and improvements, are the most requested and appreciated by our client companies: they are essential automations that make your business easy and smooth. And we keep adding more and improving them!

By choosing **Tempo Zero Industry** for *Microsoft Business Central*, you will constantly receive further extensions, up to the coverage of the features included in the original solution: *Tempo Zero Lavorazioni Meccaniche* on premise, already used in Italy, for over 10 years, by dozens of companies and hundreds of users.

AUTOMATE PROCESSES

The automatism set up in this ERP make it possible to reduce human errors. The automatic control prevents any inconsistencies in all the data of each individual Income Statement/Balance Sheet account. You can do that, by clicking a simple button, and much more.

MEET THE NEEDS OF YOUR COMPANY

In order to meet the needs of your users and make their work easier, smoother and more effective, it is necessary that the ERP works according to the established habits of Italian SMEs, specifically in line with their practice of managing the different areas. It is also necessary that there are automatic controls to save time, avoiding errors.

NEW ACCOUNTING FEATURES

Are you certain that your 'T-Accounts' are filled in correctly? Do you need a solution that can calculate the totals that you select, in G/L entries and Customer/Vendor Ledger entries, without extracting data from Excel? Do you need to check that the essential data are entered in the Customer/Vendor/Item master data?

TEMPO ZERO INDUSTRY HELPS YOU

Here's how *Tempo Zero Industry* helps you by making the start-up of *Dynamics 365 Business Central* ERP easier, as well as its use in your business. Below you can find a list of what you can use:

Administration Area:

CHART OF ACCOUNTS AUDIT:

When compiling the account fields in the Chart of Accounts, a verification about nature of the accounts has been introduced, depending on if they are *Income Statement accounts* or *Balance Sheet accounts*.

Specifically, the software verifies whether each individual analytical account has been correctly filled in, in line with its economic/patrimonial nature, as well as the corresponding Begin-Total and End-Total accounts (T-Accounts). If there is an inconsistency, the code of the account with the anomaly will be reported.

TOTALS CALCULATION FOR THE SELECTED LINES

In the Customer Ledger Entries, Vendors Ledger Entries and G/L Entries screens, it has been given the possibility to calculate totals according to the selected lines. So, in the CHART of Accounts, you will find three new options (called: Total Selection, All Totals Selection, All Totals Deselection) and a section of the totals with the calculated values. The software calculates the total amount of the selected entries and updates the Totals section. You can also select all the movements together and calculate the balance.

MASTER DATA CERTIFICATION

The certification is mandatory for the master data of Customers / Vendors / Items; the feature checks that each field is filled in correctly, before using the company names in the sales and purchase flows. It is defined in advance which are the masterdata that must be subject to certification by company policy and which are the essential data. The decertification mode can be defined, too. The check can be extended to related tables and to the valuation in different cases, for example the tables relating to payment methods (Bank Transfer or Bank Receipts).

Choose
TempoZeroIndustry!

Make your people's work easier right now!

Start immediately with the ERP, with a package of additional extensions developed for the typical Italian companies.
