NAV-lab: the power of shared experience

NAV-lab was founded in 2003 by a group of IT managers who chose to offer their customers the ERP Microsoft Dynamics NAV, now Business Centrai, as a management system capable of giving flexibility, efficiency and competitivity to business processes in SMBs.

Since then, NAV-lab has become a fundamental partner far Microsoft in ltaly.

The success of Tempo Zero, which minimizes the time of adoption of the ERP in the company, was confirmed by the rapid diffusion in terms of new users, until it

became the most widespread solution today in ltaly far those who chose the Microsoft ERP. NAV-lab's strength is itsjoint investment in R&D: the software laboratory where technical resources, experience and skills, gained in the group1s 12 software houses, are shared.

The high quality of the assistance services offered is highly appreciated, both in the ERP start-up phases, including the study and implementation of customised solutions and in the subsequent phases of support for users' daily work.

Payroll data entry

For the management of payroll data, the Business Central standard envisages the manual entry of information and this requires time and a lot of attention in order to avoid understanding and digitalization errors.

Make your people's work easier and avoid errors

Tempo Zero Industry ADV adds to Business Central the feature that allows you to import the payroll accounting entry from a structured excel / csv file: the employee imports the complex entry without having to re-enter it. This saves time and avoids errors.

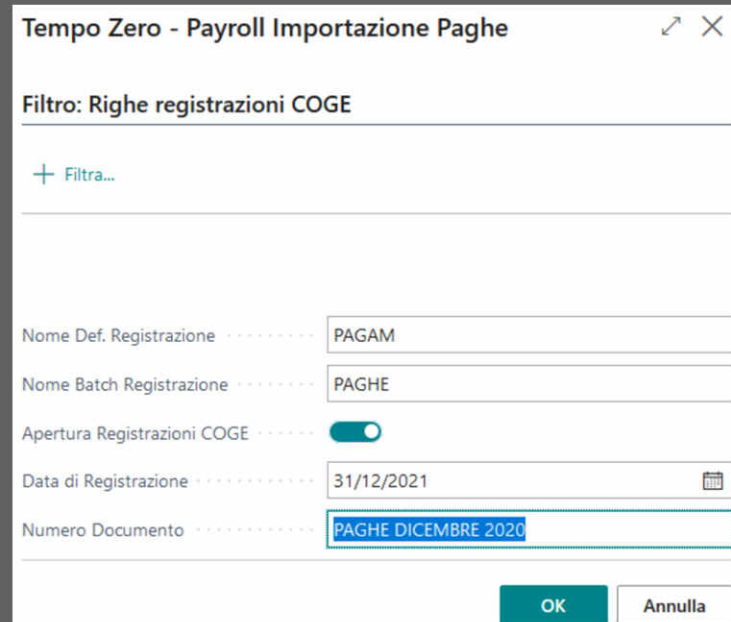

Customized reclassification of payroll parameters

The costs of employees and collaborators are kept under control by the company on a monthly and annual basis. These costs are determined by the specific items used by the individual company and the parameters are usually agreed with the labour consultants.

By using Tempo Zero INDUSTRY ADV these entries - instead of being handwritten - are automatically acquired in Business Central by simply feeding the Excel/CVS file that is made available.

Through the compilation of a specific setup, it is possible to reclassify the parameters provided by the consultant, on the basis of specific business needs.
