Tempo Zero extensions integrate and fully exploit the power of the Microsoft 365 cloud platform

NAV-lab: the power of shared experience

Since 2003, the ability of our software houses to network has allowed NAV-lab group to concentrate its actions and investments on the needs of Italian companies, determining the innovative offer.

The best projects and innovations, born within each individual company of the group, are put together, shared and improved in the NAV-lab R&D laboratory, that's where the agile and fast solutions for the Italian companies, that choose to manage their business with Microsoft ERP,

came from: Tempo Zero Premium APP is added to Tempo Zero Cloud (which is a pre-requisite), enhancing it with dedicated features for companies with manufacturing operations.

The name "**Tempo Zero**" indicates our priority intent: to reduce business COSTS by acting on the ERP start-up TIME factor, so dear to our entrepreneurs. *Tempo Zero Cloud* and *Premium* APPs contain the winning touch of flexibility and innovations that make Italian companies appreciated in the world.

Tempo Zero Premium: tailored to Manufacturing

With a range of capabilities and enhancements to the *Microsoft Dynamics 365 Business Central* standard, **Tempo Zero Premium** covers the typical features required by Italian companies in the **Manufacturing** sector.

For a long time, manufacturing processes (which involve the production of large homogeneous quantities of parts) have no longer followed a static plan-execution scheme.

The exception has become the rule: design is constantly evolving, plans are reviewed frequently, subcontractors' policy is flexible, delivery times are tight and safety margins are minimal.

To meet these needs, NAV-lab has developed the extension “Tempo Zero Premium” to provide manufacturing companies with Flexibility, Efficiency and Control.

Some additional features are also focused on cost control, traceability and job order production.

Tempo Zero Premium is in addition to the Tempo Zero Cloud extension (pre-requisite).

The security of a management system that grows and evolves with your company

Tempo Zero Premium: flexibility and efficiency

Flexibility

It may happen that a product already partially or totally assembled has to be disassembled and then reproduced in a different configuration. It may happen that orders, considered closed, are reopened to be modified. Finally, in the management of subcontracting, it is necessary to precisely define what to send to subcontractors and what to work internally: all these needs are solved by Tempo Zero Premium.

FEATURES

- Features to allow the disassembly of a produced item (restoration of components in stock and rectification of the finished product).
- Features for the reopening of a production order (change from completed to released state).
- Features in order to close a production order even if some movements or adjustments have been made and the output completely reversed.
- It is possible to indicate which components of a production order are to be sent to the subcontractors and which are to be sent later or not sent at all.

Efficiency

When companies have a very wide range of items and consequently many BOM (*bills of materials*), even minimal technical development may require updating many of them. The subdivision of production into many orders of a few pieces means that order closure registration activities can be demanding.

FEATURES

- Possibility of massive replacement of components on the production bills of materials to facilitate modification operations (massive insertion of a new article, massive replacement of the existing article with a new article and possible relative quantity, massive elimination).
- Functionality for the massive closing of completely finished production orders (for which the output has been completely recorded).
- Features to generate production orders from the Planning Worksheet directly in the released state.

Tempo Zero Premium: control, job orders, costing, traceability

Control

For effective monitoring of production progress, raw material and semi-finished product requirements and subcontracting, Tempo Zero Premium offers a dashboard of tools that provide the production manager with an effective overview

- Statement with analysis of the progress of subcontracting order lines with the identification of the status of transfers to subcontractors.
- Overview of requirements, with indication of expected income and expenses, ordered on the basis of time and accumulated stock at the date. This feature makes it possible to easily plan the company's needs, based on expected production and sales.
- Addition of statistical details useful in the production planning phase and on the MRP/MPS prospectus.
- Production Shopfloor: advanced management of production progress (with global overview of the status of production orders and any delays).
- Advanced shipment and reception plan, for the improvement of goods receipt and shipment operations.
- Several improvements to production printing, with the introduction of barcodes for the progress of the stages of production orders.
- Monitoring of Output / Consumption for the location: a specific page allows the simultaneous display of all output and consumption movements posted on a location (based on warehouse management). Using filters, it is possible to analyse/verify the status of the various production documents.

Job Orders, Costing and Traceability

- Job order movement report and evaluation (by job order size).
- BOM Valuation at Last Cost: calculation and display with references to cost source documents.
- Analysis of the Production Orders with Costing.
- Traceability on Production Orders: displays and reports showing the movements per production order, including the posting date and batch/serial number, the stock situation detailed per batch with the option to aggregate quantities produced and production times by posting date.
