NAV-lab: the power of shared experience

NAV-lab was founded in 2003 by a group of IT managers who chose to offer their customers the ERP Microsoft Dynamics NAV, now Business Central, as a management system capable of giving flexibility, efficiency and competitiveness to business processes in SMBs.

Since then, NAV-lab has become a fundamental partner for Microsoft in Italy.

The success of Tempo Zero, which minimizes the time of adoption of the ERP in the company, was confirmed by the rapid diffusion in terms of new users, until it became the most widespread solution today

in Italy for those who chose the Microsoft ERP.

NAV-lab's strength is its joint investment in R&D: the software laboratory where technical resources, experience and skills, gained in the group's 12 software houses, are shared.

The high quality of the assistance services offered is highly appreciated, both in the ERP start-up phases, including the study and implementation of customised solutions and in the subsequent phases of support for users' daily work.

Tempo Zero Worldwide Premium

This is the app for *Microsoft Dynamics 365 Business Central*, developed by NAV-lab, to modernise the manufacturing area of your company, adding specific features to the Microsoft ERP standard version.

It includes the features most required by manufacturing companies: production managers need to continually review production plans and meet short deadlines with *minimal risk margins*. We have therefore created an APP which adds to the Business Central standard the **flexibility, efficiency and control tools** needed to be able to respond with agility to specific international market demands, while maintaining *production control, cost control, traceability and job order management*.

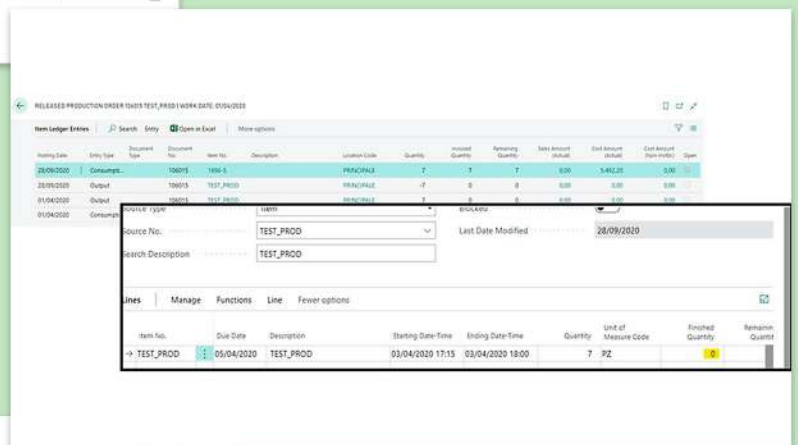

Tempo Zero Worldwide Premium, together with the *Tempo Zero Worldwide* app – its pre-requisite – reduces the need to introduce the additional customisations usually required by manufacturing managers.

Tempo Zero Worldwide Premium: screenshot in Business Central

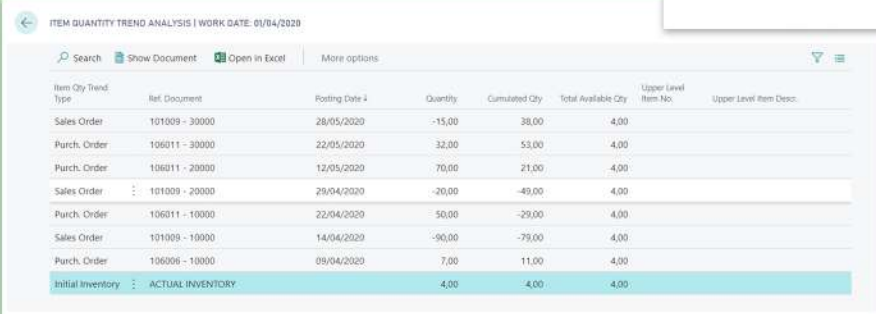

The BOM component replacement function allows the user to perform advanced mass management of component replacement.

The disassembly function of production orders restores recorded production movements, returning components to their original warehouses.

The evolution of requirements: the feature with which to analyse how the quantity of a specific item evolves over time, also taking into account expected incoming or outgoing stock movements.

Tempo Zero Worldwide Premium

Flexibility

Thanks to the flexibility of 'disassembly' functionality, a product already partially or totally assembled has to be disassembled and then reproduced in a different configuration. Orders, considered closed, can be reopened to be modified.

FEATURES:

- **Disassembly of produced items** (restoration of components in stock and rectification of the finished product).
- **Reopening of production orders** (change from completed to released state).
- **Closing of production orders** even if some movements or adjustments have been made and the output completely reversed.

Control dashboard

For effective monitoring of production progress, raw material and semi-finished product requirements and subcontracting, Tempo Zero Worldwide Premium offers a dashboard of tools that provide the production manager with an effective overview.

FEATURES

- **Overview of requirements**, with indication of expected income and expenses.
- **Addition of statistical details** useful in the production planning phase and on the MRP/MPS prospectus.
- **Advanced management of production progress.**
- **Advanced shipment and reception plans.**
- **Several improvements to production printouts**, with the introduction of barcodes for the progress of the stages of production orders.
- **Monitoring of Output / Consumption** for any location.

Efficiency

When companies have a very wide range of items and consequently many BOMs (bills of materials), even minimal technical development may require updating many of them. The subdivision of production into many orders of a few pieces means that order closure registration activities can be demanding.

FEATURES

- **Massive replacement of components on the production BOMs** to facilitate modification operations (massive insertion of a new article, massive replacement of the existing article with a new article and possible relative quantity, massive elimination).
- **Massive closing of completely finished production orders** (for which the output has been completely recorded).
- The generation of production orders from the Planning Worksheet directly in the released state.

Job Orders, Costing and Traceability

In Tempo Zero Worldwide Premium are set up:

- **Job order movement reports and evaluations** (by job order size).
- **BOM Valuations at Last Cost:** calculation and display with references to cost source documents.
- **Analysis of the Production Orders with Costing.**
- **Traceability on Production Orders:** displays and reports showing the movements per production order, including the posting date and batch/serial number, the stock situation detailed per batch with the option to aggregate quantities produced and production times by posting date.
