NAV-lab: the power of shared experience

NAV-lab was founded in 2003 by a group of IT managers who chose to offer their customers the ERP Microsoft Dynamics NAV, now Business Central, as a management system capable of giving flexibility, efficiency and competitiveness to business processes in SMBs.

Since then, NAV-lab has become a fundamental partner for Microsoft in Italy.

The success of Tempo Zero, which minimizes the time of adoption of the ERP in the company, was confirmed by the rapid diffusion in terms of new users, until it became the most widespread solution today in

Italy for those who chose the Microsoft ERP.

NAV-lab's strength is its joint investment in R&D: the software laboratory where technical resources, experience and skills, gained in the group's 12 software houses, are shared.

The high quality of the assistance services offered is highly appreciated, both in the ERP start-up phases, including the study and implementation of customised solutions and in the subsequent phases of support for users' daily work.

Tempo Zero Worldwide

Tempo Zero Worldwide per Microsoft Dynamics 365 Business Central Essential features to be used by companies worldwide for the fast start-up of Microsoft ERP.

It introduces enhancements, new reports, printouts and features to the standard ERP, promotes more flexible operations and introduces controls and automations to simplify the users' work in several areas of the company, such as sales or warehousing.

They are the most requested features by companies and being already available in a single extension, they reduce the time and costs of ERP start-up in the company. They drastically reduce the need to create expensive customisations, as well.

costant updates...

NAV-lab's focus on safeguarding customers' investments

Tempo Zero Worldwide contains the best features included in the *Tempo Zero Cloud App* for Italy, certified by Microsoft, and is designed to meet the needs of NAV-lab customers with offices abroad, thus making it suitable for being used by worldwide companies.

The NAV-lab R&D Laboratory has been creating, improving and continuously integrating additional Tempo Zero features to the Microsoft ERP since 2003.

**The security of a
ERP system that
grows and evolves
with your company
over time**

Master Data Certification

The certification provides for the verification and validation of the master data of Customers / Vendors / Items; the feature checks that each field is filled in correctly, before using the company names in the sales and purchase flows. It is defined in advance which are the masterdata that must be subject to certification by company policy and which are the indispensable data.

You can also use the mode of “decertification” of the various fields, i.e. the process by which the data in the master data are revalidated in case of changes. The strength of this feature is to provide qualified data upstream, giving the possibility to conclude the flow smoothly and without errors.

Order lines closure

It provides for the alignment of the quantities ordered and to be shipped to those actually shipped up until that moment: in this way the order residues of quantities that have not been processed or cannot be processed are closed. The intent is to be able to have order portfolio data that do not contain “misprints” but are congruous and true.

Packing List

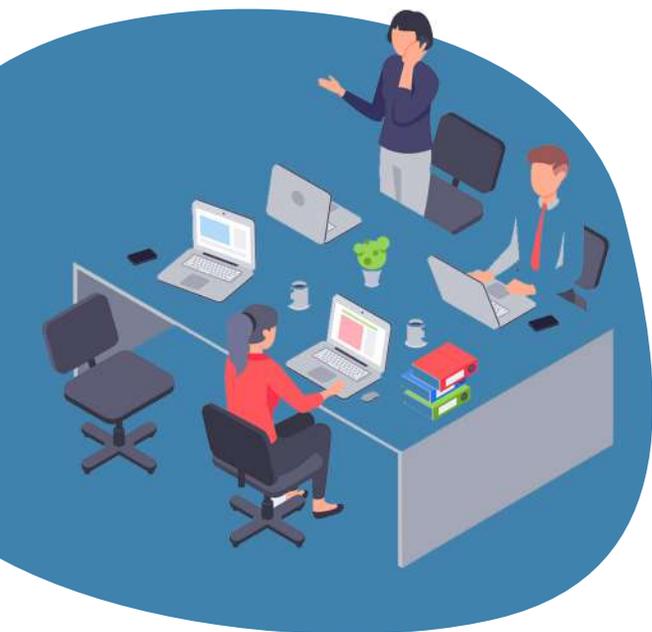

The management of the PACKING LIST and related prints, integrates the management of sales notes and shipment documents: starting from the Sales Order you can open a specific document by which to subdivide into different packages the material to be shipped and for each package are reported some dimensional information.

Account description

It introduces the ACCOUNTING DESCRIPTION management that allows to define an accounting description that can be modified before registering the documents at user's discretion in Invoices/Credit notes, purchases and sales.

Tempo Zero Worldwide: funzionalità aggiuntive a Business Central

Free Shipping Documents

It allows the management of logistics documents not strictly associated with specific orders, i.e. documents that can be either only descriptive or linked to the warehouse, but not to specific purchase or sales orders.

Price and Discount management

Amplia le regole per il calcolo per la gestione di PREZZI e SCONTI aggiungendo la possibilità di determinare un'escalation decidendo la priorità nella scelta del prezzo di vendita in alternativa alle logiche standard di Business Central

Grouped shipments and receivings

TZ enhances the standard functionality in the GROUPED SHIPMENTS AND RECEIPTS to allow shipping based on multiple sales order lines and receiving multiple purchase order lines from a single summary document.

Offers and orders storage

It allows to maintain the Sale Offers and Purchase Offers history if converted in order, and Sale Orders and Purchase Orders history if completely evaded.

Job order management

Job order management and direct task on sale and purchase lines (with posting of the relative job accounting entries) and Job management and task on free shipment documents.

It also allows the analysis of the movements and evaluation of the job orders: it is therefore possible to have an overview of the movements on the job order through two reports, which work on the job order size or directly starting from the Job table.

Reporting

the following reports are introduced: Item Age Composition – Qty., Vendor delivery report, CMR for Shippers, Job entries, Job movements and evaluation (by job size).
